5-6 ft. ....	1.75	1.50	1.25

CYPRESS, Italian Worthiana:			
Very superior strain of symmetrical upright growth, and much hardier than other cypresses. The parent tree on our grounds is twenty years old and has never been injured by cold when all other specimens were either killed outright or severely damaged by the severe cold spells we have had every four or five years. Young plants propagated from this stock were uninjured in the field while other stock was killed. Every tree is handsome and uniform in its growth.			
2-3 ft. ....	\$ .90	\$ .75	\$ .60

**GOLDFLAME, Honeysuckle:**  
(Name Trade-Marked)

A superlative variety: beautiful, hardy and versatile. The large flame-coral trumpets lined with gold, fragrant after nightfall, appear in immense, showy clusters the same year the plant is set out. Reaching its full glory of bloom in early summer, it nevertheless flowers abundantly from May until frost. Dark blue-green foliage, disease and pest free, is attractive in itself and makes a perfect background for the brilliance of the flowers.

Allowed to grow naturally, Goldflame will climb a trellis or spread as a ground cover; pruned it becomes a striking specimen shrub while if planted in a row and sheared it gives a smashing effect as an everblooming hedge.

**POMEGRANATE, Bakers Beauty:**  
(Plant Patent No. 184)

This fine new flowering shrub is a real addition to the plant list of southern plants. Fine textured leaves, bright red flowers and heavy fruit all on the plant at one time combine to give a very pleasing effect. Mature height about 4 feet. Not hardy or recommended north of Fort Worth. A fine plant for landscape work but not so good for retail sales yards, because it is usually dormant during the spring selling season.

## ROSEGLO, Honeysuckle:

Evergreen south, hardy north, and a free and abundant bloomer from late spring until severe winter. The flowers are two-lipped, tubular, deep rose-pink outside and creamy-white inside; exceedingly fragrant, borne in terminal clusters over the entire plant. The plant is erect and twining, forming a striking and desirable shrub if the long shoots are clipped back at intervals, though if allowed to grow freely will develop into a spreading, low-growing vine. The glossy gray-green foliage is very handsome.
